Process tracing is a method used to explain change and causation, and to evaluate and develop theories in the social sciences. It has been used in psychology, political science, or usability studies.. In process tracing studies, multiple data points are collected in comparison to simple input-output methods, where only one measurement per task

process observations,  
or CPOs. The idea of  
CPOs highlights the  
contrast between (a)  
the empirical  
foundation of  
qualitative research,  
and (b) the data  
matrices analyzed by  
quantitative  
researchers, which  
may be called data-set  
observations (DSOs).

Process tracing is a fundamental tool of qualitative analysis. This method is often invoked by scholars who carry out within-case analysis based on qualitative data, yet frequently it is neither adequately understood nor rigorously applied. This deficit motivates this article, which offers a new framework for carrying out process tracing.
