### **fish | Definition, Species, & Facts | Britannica**

fish: [noun] an aquatic animal. any of numerous cold-blooded strictly aquatic craniate vertebrates that include the bony fishes and usually the cartilaginous and jawless fishes and that have typically an elongated somewhat spindle-shaped body terminating in a broad caudal (see caudal 2) fin, limbs in the form of fins when present at all, and a ...

### **Fish**

Fish are gill-bearing aquatic craniate animals that lack limbs with digits.They form a sister group to the tunicates, together forming the olfactores.Included in this definition are the living hagfish, lampreys, and cartilaginous and bony fish as well as various extinct related groups.

### **Fish Pictures & Facts - National Geographic**

Fish (plural: fish or fishes) are vertebrates which live in water and respire (get oxygen) with gills.They lack limbs with digits (fingers & toes). This is a definition which does not quite work: some amphibia also live in water and have external gills, but they are not fishes.
