Change of Basis In many applications, we may need to switch between two or more different bases for a vector space. So it would be helpful to have formulas for converting the components of a vector with respect to one basis into the corresponding components of the vector (or matrix of the operator) with respect to the other basis.

A "look at" matrix is supposed to rotate you so your old \$(x,y,z)\$ coordinate axes become aligned with a new set of coordinate axes \$(newx, newy, newz)\$. Basically a change of basis. Working in an LH coordinate system, using row major matrices, according to this document, this rotation matrix should be constructed as:
